Fifa World Cup Mood Visualization

Subject :

This web app will read all tweets about a certain match. The tweets will be classified as positive or negative. Tweets will be shown as a percentage of positive and negative and will be localized to a country. This way the user can gauge a country's mood about a certain match.

Data :

- Twitter
- Facebook
- Sentiment Analysis API
- Google Maps

Technology :

- HTML
- CSS
- Javascript
- JQuery

Challanges:

Coding
- Having the APIs talk to each other
-Storing info as variables or objects
- OOP if necessary

Data
- Free key limitaions (500 tweets)
- Number of tweets about the match that are geo tagged

Brazil vs Portugal
